SERVICES  
DISTRICT

*It is our mission to provide safe,  
high quality water and sewer  
services to our community.*

# Water and Sewer Tips

Use less water and save money with these helpful tips

- Fix dripping taps as soon as you notice them.
- Replace your faucet aerators and clean them monthly. It will not only help reduce water usage, but also helps provide cleaner drinking water.
- While you wait for water to heat up at your kitchen and bath faucets, collect the water in a pitcher or bucket to use for your plants.
- Fix running toilet immediately, otherwise several gallons of water will be wasted every hour.
- Put a few drops of food coloring into your toilet tank and don't flush for a few hours. When you come back to your toilet, if there is colored water in your toilet bowl then you have a leak.
- Turn off your faucet while brushing your teeth and shaving.
- Only use one glass for drinking water per day. This will reduce the number of glasses to wash and will save water.
- Don't rinse dishes with running water. Use one tub or basin to wash and the other to rinse.

## Continue....

- Use a pitcher or clean gallon jug to store water in your refrigerator instead of letting the faucet run every time you want a cold glass of water.
- Match the amount of water with the load in your washing machine.
- Succulents are popular house plants. Choose them instead of thirstier

- house plants or fresh cut flowers.
- Soak fruits and vegetables in a tub to clean them at the same time rather than running each item under your faucet.
- Check the weather forecast before watering your lawn – you may not have to water that day at all.
- Use a broom instead of a hose to clean outdoor areas, such as driveways, sidewalks and exterior walls.

## Additional Savings

- Only run the dishwasher when it's full
- Teach children to turn off the faucet after every use.
- If you drop ice cubes on the floor, don't throw them away! Throw them in a house plant instead!
- Shorten your shower by a minute or two and you'll save up to 150 gallons per month
- Know where your water shut-off valve is located. Were a pipe to burst, this could save gallons of water and prevent damage.
- Modern dishwashers typically use less water than washing dishes by hand
- Don't use the toilet as a wastebasket!
- Washing dark clothes in cold water saves water and energy and helps your clothes retain their color
- Designate one glass or bottle for your drinking water each day to cut down the number of items to wash
- Turn off the water while you brush your teeth and save up to 4 gallons a minute. That's up to 150 gallons a week for a family of three!

### IMPORTANT

- Keep grease out of pipes
- Flushable Wipes don't flush
- Protect your wallet, check for leaks
